

Network attacks

Where you stand depends on where you sit, but all threats are cross-vector threats. Take that through the lens of network attacks and I am having an enormous scope creep in the four most commonly pigeonholed network attacks. Not a problem, the right hemisphere wants to externalise possible connections made, in order to facilitate more grounded thinking about it, with a focus on possible mitigations and [building our own teams](#).

- [Reconnaissance attacks](#)
- [Access attacks](#)
- [Denial-of-Service attacks](#)
- [Data manipulation attacks](#)

[threats](#), [network](#)
